### **Synergistic Activities**

I have worked with colleagues from different disciplines in the promotion of interdisciplinary, multidisciplinary, and international cooperation all my professional life. I began my academic career by studying Scandinavian literature and languages and intellectual history – the history of ideas. My interests in the natural world and human ecology led me to focus on the history of the climate and the environment. This in turn has led to the bringing of a “human dimensions” element to natural science research projects and ultimately to a focus on Arctic studies in general. The wealth of my synergistic activities is attested to by my list of collaborative colleagues above.

## Service and Administrative Activities

I was on the steering committee of the US National Science Foundation Human Dimensions (HARC) initiative and contributed to writing the publication *People and the Arctic: A Prospectus for Research on the Human Dimensions of the Arctic System*. I was also the “Human Dimensions” representative on the NSF OAI (Ocean-Atmosphere-Ice Interactions) steering committee and have contributed to their science plan: *A Prospectus for the Arctic System Science Ocean-Atmosphere-Ice Interactions Component*. In April 2002 I was elected to the Board of Directors of ARCUS (the Arctic Research Consortium of the United States <http://www.arcus.org>). In 2005 I was elected to a second term. I stepped down in 2008 in order to have more time for my research projects. I served on the scientific committee of the European Science Foundation BOREAS programme from 2007-2010. I have served on the editorial board of five international journals and review numerous articles and proposals annually. At INSTAAR I served as Associate Director for nearly 3 years, thus gaining much administrative experience. I have served on several INSTAAR committees including a number of years on the Executive Committee. On the board of the Inscribing Environmental Memory in the Icelandic Sagas project (<http://ihopenet.org>). On the advisory board of the Human Ecodynamics Research Center (HERC) at the City University of New York (CUNY) Graduate Center. HERC coordinates the efforts of scholars in a formal research collaborative addressing crucial issues of sustainability, resilience, and the future of humans on earth. I am the Chairperson of the Advisory Board for the Nicolaus Copernicus University (Torún, Poland) Centre for Climate Change Research (CCCR <https://cccr.umk.pl/pages/board/>). In addition to these I regularly organize meetings and conference panels and sessions.
